

Internet Connection

Windowizard is a web based application, by design it requires an internet connection so the individual browser can retrieve information (such as Roll widths) and process large transactions.

Given the amount of data that exists, e.g. fabrics or colours it is not possible to download the information to an individual user's PC hence the need for an internet connection

If you are experiencing technical difficulties please test your internet connections as follows:

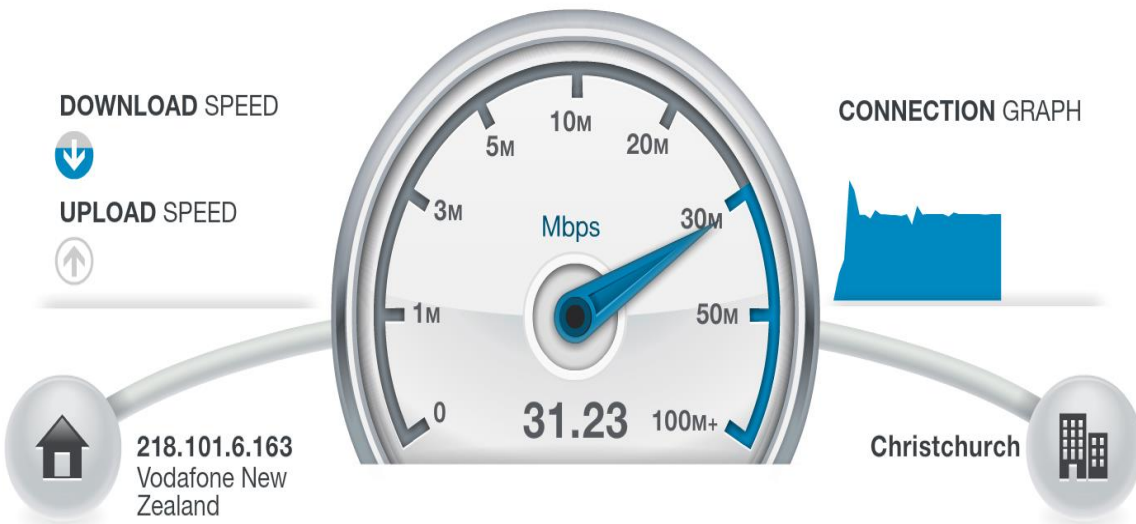

Windowizard Recommends speeds of 5Mbps down
 1 Mbps up

If you have speeds led than this then you may experience difficulties
